EDUCATION

North Seattle College

Application Development, Bachelor of Applied Science (BAS).

Seattle, WA

Expected Fall 2026

CERTIFICATIONS

- AWS Academy Graduate: Cloud Developing -- credly.com/badges/8872ed4a-e885-4304-887a-75143757efeb
- AWS Academy Graduate: Cloud Architecting -- credly.com/badges/7cc23f53-e37d-4928-b296-638648f4c9d4
- AWS Academy Graduate: Machine Learning Foundations -- credly.com/badges/5e0798c9-3021-42f6-8be8-6522a5cd4b70

SKILLS

Languages: Java, C#, Python, TypeScript, JavaScript, SQL

Frameworks: .NET, React, Next.js, Node.js, Express

Cloud: Azure Functions, Durable Functions, Azure Blob Storage, Azure Event Grid, Azure AI Foundry, AWS S3

Tools: Git, Linux, PowerShell, SQL Server

EXPERIENCE

Software Engineer Intern, CloudPath Runtime Intelligence

June 2026 – September 2026

Microsoft

Redmond, WA

- Eliminated over 80% of manual processes by designing and implementing AI-powered workflows that batched LLM calls to reduce cost and used Azure Event Grid to automate orchestration triggering, transforming a legacy reporting process into a scalable, maintainable service.
- Reduced AI processing costs by 20% through optimization of large-scale analysis and reporting workflows.
- Built and deployed scalable cloud applications using C#, Azure Functions, Durable Functions, and Azure AI Foundry to improve operational efficiency and reliability.
- Collaborated with engineering, product, and customer stakeholders to deliver a business-oriented solution for long-term customer-facing use.

Explore Intern, PM + SWE, M365 Substrate OSSKU

June 2025 – September 2025

Microsoft

Redmond, WA

- Collaborated with a team of three to deliver an AI-powered Job Log Analysis System during a 12-week Product Management and Software Engineering internship.
- Reduced diagnostics time by 70%, improved platform reliability, and accelerated firmware rollout while lowering incident volume.
- Developed a backend system for automated log ingestion using PowerShell, XML, and C# (.NET Core), integrating Azure Blob Storage and SQL Server for LLM-based analysis.
- Built and deployed an AI Analysis Service to handle UI-triggered LLM requests, including background processing, caching, and concurrency control.
- Applied chunking and Retrieval-Augmented Generation (RAG) techniques to enhance LLM performance in analyzing complex system logs.

PROJECTS

Vaux vaux-ten.vercel.app

A real-time music listening room

- Engineered a real-time distributed music platform with Socket.io, Node.js, Next.js/React, and Python, supporting synchronized queues, voting, real-time chat, host controls, and playback across web and CLI clients.
- Designed deterministic playback synchronization using server-authoritative timestamps and client-side drift correction across YouTube IFrame and MPV players.
- Implemented cross-language cryptography with Argon2id hashing and authenticated encryption, and published the Python Textual + MPV CLI as a PyPI package.

ACTIVITIES & LEADERSHIP

Expedia Career Experience Program

October 2024

Software Development Track

- Participated in 1:1 mentorship with a Software Engineer at Expedia Group, building leadership, communication, and decision-making skills through career guidance and industry insights. Developed career-readiness skills through workshops on personal branding, resume strategy, navigating difficult conversations, and responsible AI adoption.
